As universities move towards becoming more research intensive while maintaining quality in teaching and learning it is expected that all academic staff will engage in scholarship of teaching and learning. One aspect of scholarship is research in teaching and learning. Although academics may want to conduct educational research they do not necessarily have the research background to do so. Educational research has its own particular research paradigms, methodologies, data sources and methods of analysis some of which may be unfamiliar. In 2011, a curriculum resource and professional learning programme was developed at Curtin University to enable academics to engage in educational research in tertiary settings. The curriculum resource includes modules on educational research paradigms, research methodologies, data sources, ethics, data analysis, writing, publishing and applying for grants. In 2012, the programme was piloted with 26 academics. The programme has been challenging as academics struggle to understand research methods they are not familiar with and find time within their busy academic lives. Nonetheless, the participants are enthusiastic and many are making steady progress in their research. This presentation will focus on preliminary findings of the experiences and outcomes of the participants.
